1. Project Overview

1.1 Project Title

RideNova Vehicle & Fleet Management System

1.2 Introduction

RideNova Vehicle & Fleet Management System is a Salesforce Admin project developed to manage vehicle rental operations in a simple and organized way.

The system helps manage vehicles, customer bookings, payments, maintenance records, driver assignments, vehicle inspections, customer feedback, and support tickets from one platform.

This project is created using Salesforce Admin tools such as Custom Objects, Fields, Validation Rules, Flows, Reports, Dashboards, Page Layouts, Permission Sets, and Lightning App Builder.

1.3 Problem Statement

Many vehicle rental businesses manage their records manually or in different files, which makes it difficult to track bookings, vehicle availability, payments, maintenance schedules, and customer issues.

This project provides a centralized Salesforce solution to manage all these operations efficiently.

1.4 Project Objectives

- Manage vehicle information.
- Record customer bookings.
- Track payments.
- Maintain vehicle service history.
- Assign drivers to bookings.
- Record vehicle inspections.

- Manage customer feedback.
- Handle customer support tickets.
- Generate reports and dashboards for business insights.

1.5 Scope of the Project

This project is designed for learning Salesforce Administration and demonstrates how Salesforce can be used to automate a vehicle rental business.

The project includes:

- Vehicle Management
- Booking Management
- Payment Management
- Vehicle Maintenance
- Driver Assignment
- Vehicle Inspection
- Customer Feedback
- Support Ticket Management
- Reports & Dashboards

2. Project Architecture

2.1 Project Modules

The RideNova Vehicle & Fleet Management System is divided into different modules. Each module is responsible for managing a specific business process.

The main modules of the project are:

- Vehicle Management
- Booking Management
- Payment Management
- Vehicle Maintenance
- Driver Assignment
- Vehicle Inspection
- Customer Feedback
- Support Ticket Management
- Reports and Dashboards

2.2 Custom Objects

Object Name	Purpose
Vehicle	Stores vehicle details and availability.
Booking	Stores customer booking information.
Payments	Stores payment details for each booking.
Vehicle Maintenance	Tracks vehicle service and maintenance records.
Driver Assignment	

	Stores driver assignment details.
Vehicle Inspection	Stores vehicle inspection records before and after rental.
Customer Feedback	Stores customer ratings and feedback.
Support Ticket	Stores customer complaints and support requests.

2.3 Object Relationships

The RideNova Vehicle & Fleet Management System uses Lookup Relationships to connect different objects. These relationships help maintain data consistency and make it easier to manage the complete vehicle rental process. Each booking is connected with a vehicle, payment, driver assignment, inspection, customer feedback, and support ticket. Vehicle maintenance records are directly connected to the vehicle object.

Vehicle

└──► **Vehicle Maintenance**

Relationship Summary

Parent Object	Child Object	Relationship Type
Vehicle	Booking	Lookup
Vehicle	Vehicle Maintenance	Lookup
Booking	Payment	Lookup
Booking	Driver Assignment	Lookup
Booking	Vehicle Inspection	Lookup
Booking	Customer Feedback	Lookup
Booking	Support Ticket	Lookup

3. Custom Fields

3.1 Vehicle Object

The Vehicle object stores all information related to rental vehicles. It helps the company manage vehicle details, rental pricing, availability, registration details, and technical specifications.

Field Name	Purpose
Vehicle Name	Stores the name of the vehicle.
Brand	Stores the vehicle brand.
Model	Stores the model name.
Vehicle Type	Stores the type of vehicle.
Daily Rent	Stores the rental price per day.
Availability Status	Shows whether the vehicle is available or booked.
Registration Number	Stores the registration number.

Figure 3.1 – Vehicle Record Page

3.2 Booking Object

The Booking object stores all customer booking information. It helps manage vehicle reservations, booking dates, rental duration, booking status, and customer details.

Field Name	Purpose
Booking Number	Stores the unique booking ID.
Customer	Stores the customer details.
Vehicle	Stores the selected vehicle.
Pickup Date	Stores the pickup date.
Return Date	Stores the return date.
Total Rental Days	Calculates the total rental period.
Booking Status	Shows the booking status.
Total Amount	Stores the total booking amount.

Figure 3.2 – Booking Record Page

The screenshot displays the 'Booking Record Page' for a specific booking, BKG-00002. The page is part of a web application with a navigation bar at the top containing links like Home, Accounts, Contacts, Vehicles, Bookings, Payments, Reports, Dashboards, Vehicle Maintenance, Customer Feedbacks, Support Tickets, Driver Assignments, and Vehicle Inspections. The main content area is divided into several sections:

- Booking Overview:** Displays key details such as Booking Number (BKG-00002), Booking Date (24/07/2028), Booking Status (Confirmed), Pickup Date (28/07/2028), Return Date (30/07/2028), and Total Rent (₹8,000.00).
- Vehicle & Customer:** Shows the Vehicle (Hyundai i20 Sport) and Customer (Riya Verma).
- Payment Information:** Details include Total Rental Days (4), Total Rent (₹8,000.00), Payment Status (Paid), and Security Deposit (₹3,000.00).
- Pickup & Return:** Lists the Pickup Location (Noida Sector 62) and Drop Location (Ghaziabad Railway Station).
- Additional Information:** Includes Booking Notes (First-time customer), Created By (Shash Shrivastava), and Last Modified By (Shash Shrivastava).
- Activity:** A section on the right showing a timeline of events. It currently displays 'No activities to show' and provides instructions on how to start logging activities.

The bottom of the page shows a Windows taskbar with various application icons and system information like temperature (31°C) and time (21:42 on 01-08-2028).

3.3 Payment Object

The Payment object stores all payment information related to customer bookings. It helps track payment amount, payment method, payment status, and transaction details. This module makes payment management simple and organized.

Field Name	Purpose
Payment ID	Stores the unique payment ID.
Booking	Links the payment to a booking.
Payment Amount	Stores the payment amount.
Payment Date	Stores the payment date.
Payment Method	Stores the payment method.
Payment Status	Shows whether the payment is completed or pending.
Transaction ID	Stores the transaction reference number.

Figure 3.3 – Payment Record Page

3.4 Vehicle Maintenance Object

The Vehicle Maintenance object stores maintenance and service records of vehicles. It helps track service schedules, maintenance costs, service status, and maintenance dates. This module ensures that vehicles remain in good condition before they are rented to customers.

Field Name	Purpose
Maintenance ID	Stores the unique maintenance record ID.
Vehicle	Links the maintenance record to a vehicle.
Maintenance Type	Stores the type of maintenance.
Maintenance Date	Stores the maintenance date.
Maintenance Cost	Stores the maintenance cost.
Service Status	Shows the current maintenance status.
Remarks	Stores additional maintenance notes.

Figure 3.4 – Vehicle Maintenance Record Page

3.5 Driver Assignment Object

The Driver Assignment object is used to assign drivers to customer bookings. It stores driver information, assigned vehicle details, assignment date, and assignment status. This module helps manage drivers efficiently and avoids confusion during vehicle delivery.

Field Name	Purpose
Assignment ID	Stores the unique assignment ID.
Booking	Links the assignment to a booking.
Driver	Stores the assigned driver details.
Vehicle	Stores the assigned vehicle.
Assignment Date	Stores the assignment date.
Assignment Status	Shows whether the driver is assigned or completed.
Remarks	Stores additional notes related to the assignment.

Figure 3.5 – Driver Assignment Record Page

3.6 Vehicle Inspection Object

The Vehicle Inspection object is used to record the condition of a vehicle before and after the rental period. It helps identify any damage, additional charges, and inspection remarks. This module ensures transparency between the company and the customer.

Field Name	Purpose
Inspection ID	Stores the unique inspection ID.
Booking	Links the inspection to a booking.
Vehicle	Stores the inspected vehicle details.
Inspection Date	Stores the inspection date.
Vehicle Condition	Stores the condition of the vehicle.
Damage Charges	Stores additional damage charges, if any.
Inspection Remarks	Stores inspector's remarks.

Figure 3.6 – Vehicle Inspection Record Page

3.7 Customer Feedback Object

The Customer Feedback object stores customer reviews and ratings after the rental service. It helps the company understand customer satisfaction, improve service quality, and maintain a better customer experience.

Field Name	Purpose
Feedback ID	Stores the unique feedback ID.
Booking	Links the feedback to a booking.
Customer	Stores customer details.
Rating	Stores the customer rating.
Feedback Date	Stores the feedback submission date.
Comments	Stores customer comments.
Feedback Status	Shows whether the feedback has been reviewed

Figure 3.7 – Customer Feedback Record Page

3.8 Support Ticket Object

The Support Ticket object is used to manage customer complaints and support requests. It helps track issues, monitor ticket status, assign priorities, and record resolutions. This module improves customer service and ensures that every issue is resolved on time.

Field Name	Purpose
Ticket ID	Stores the unique support ticket ID.
Customer	Stores customer details.
Booking	Links the ticket to a booking.
Issue Type	Stores the type of issue reported.
Priority	Stores the priority level of the ticket.
Status	Shows the current ticket status.
Resolution Notes	Stores the solution provided for the issue.

Figure 3.8 – Support Ticket Record Page

4. Validation Rules

4.1 Introduction

Validation Rules are used to maintain data accuracy and prevent users from entering incorrect information. In the RideNova project, validation rules ensure that only valid and meaningful data is saved in the system. This improves data quality and reduces manual errors.

4.2 Validation Rules Implemented

Object	Validation Rule
Vehicle	Daily Rent cannot be less than or equal to 0.
Booking	Return Date must be greater than Pickup Date.
Payment	Payment Amount must be greater than 0.
Vehicle Maintenance	Maintenance Cost cannot be negative.
Vehicle Inspection	Damage Charges cannot be negative.
Customer Feedback	Rating must be between 1 and 5.

4.3 Benefits of Validation Rules

- Prevents invalid data entry.
- Improves data accuracy.
- Reduces manual mistakes.
- Ensures business rules are followed.
- Maintains consistency across records.

The validation rules were implemented to improve data accuracy and ensure that only valid information is stored in the system.

5. Record-Triggered Flows

5.1 Introduction

Record-Triggered Flows are used to automate business processes without writing code. In the RideNova project, flows automatically update records and reduce manual work. This improves efficiency and ensures that business processes run smoothly.

5.2 Flows Implemented

Flow Name	Purpose
Vehicle Booking Flow	Updates vehicle status when a booking is created.
Payment Flow	Updates payment information after payment is completed.
Vehicle Maintenance Flow	Updates maintenance status after service completion.
Vehicle Inspection Flow	Records inspection details after vehicle return.
Driver Assignment Flow	Assigns drivers to confirmed bookings.

5.3 Benefits of Flows

- Reduces manual work.
- Automates business processes.
- Improves data accuracy.
- Saves time.
- Provides a better user experience.

6. Reports and Dashboards

6.1 Introduction

Reports and Dashboards are used to analyze business data and support better decision-making. In the RideNova project, reports help organize records, while dashboards provide a visual summary of important business information.

6.2 Reports Created

Report Name	Purpose
Vehicle Report	Displays all vehicle records and their details.
Booking Report	Displays customer booking information.
Payment Report	Tracks payment records and payment status.
Maintenance Report	Shows vehicle maintenance history.
Driver Assignment Report	Displays driver assignment details.

6.3 Dashboard Components

Dashboard Component	Purpose
Vehicle Availability	Shows available and booked vehicles.
Booking Status	Displays booking status.
Payment Summary	Shows payment information.
Maintenance Status	Tracks vehicle maintenance records.
Driver Assignment	Displays assigned drivers.
Customer Feedback	Shows customer ratings and feedback.

Figure 6.1 – RideNova Dashboard

7. Lightning App & User Interface

7.1 Introduction

The RideNova application uses Salesforce Lightning App Builder to create a simple, user-friendly, and professional interface. Different record pages are customized to improve navigation and provide users with all important information in one place.

7.2 Home Page

The Home Dashboard provides a quick overview of the entire RideNova system. Users can view important business information such as vehicle availability, booking status, payment summary, maintenance status, driver assignments, and customer feedback from one page.

Figure 7.1 – RideNova Home Dashboard

8. Challenges Faced

During the development of the RideNova project, I faced several challenges while designing the application and implementing different Salesforce features.

The major challenges were:

- Designing proper relationships between custom objects.
- Creating validation rules without affecting existing records.
- Building record-triggered flows for business automation.
- Designing reports and dashboards with meaningful data.
- Customizing Lightning Record Pages for a better user experience.
- Understanding dashboard chart configuration and report grouping.
- Organizing the application with a clean and professional user interface.

9. Learning Outcomes

This project helped me improve my Salesforce Admin skills through practical implementation.

After completing this project, I learned:

- Creating custom objects and custom fields.
- Managing lookup relationships.
- Creating validation rules.
- Building record-triggered flows.
- Designing Lightning Record Pages.
- Creating reports and dashboards.
- Managing application navigation.
- Organizing business data efficiently.
- Improving problem-solving skills while working on a real-world project.

10. Future Scope

The current version of RideNova is developed using Salesforce Admin features. In the future, this project can be enhanced by adding Salesforce Developer features.

Future improvements include:

- Lightning Web Components (LWC)
- Apex Classes
- Apex Triggers
- Email Notifications
- Approval Processes
- REST API Integration
- Mobile-friendly custom components
- Advanced analytics and dashboards

These improvements will make the application more powerful and provide a better user experience.

11. Conclusion

RideNova Vehicle & Fleet Management System is a Salesforce Admin project developed to manage vehicle rental operations efficiently.

The project includes custom objects, relationships, validation rules, record-triggered flows, reports, dashboards, and Lightning Record Pages.

This project helped me gain practical experience with Salesforce Administration and improved my understanding of business process automation.

The knowledge gained from this project will help me in future Salesforce Admin and Salesforce Developer roles.

This project strengthened my understanding of Salesforce Administration and prepared me to work on real-world Salesforce applications.
